CLENDENING LAKE

Harrison County

LOCATION

Clendening Lake is in southwestern Harrison County in Washington and Nottingham townships. The dam is at Tippecanoe off State Route 800. State Route 799 bisects the lake. Township roads provide access to the lake on all boundary lines. Access to Interstate 77 is available at New Philadelphia which lies 25 miles to the north.

HISTORY AND DESCRIPTION

Clendening Lake, one of the flood control impoundments of the Muskingum Watershed Conservancy District, was constructed in Brushy Fork of Big Stillwater Creek. This 1,702-acre lake is mostly long, narrow, and winding and most of its 35.5 miles of shoreline is deeply wooded. There is a 10-horsepower outboard motor limit on this lake.

The Muskingum Watershed Conservancy District was organized under state law in 1933 for the primary purposes of flood control, conservation, and recreation. The first waters to form the permanent lakes were impounded in 1938. In 1939, the flood control aspect became the responsibility of the United States Army Corps of Engineers as part of the Ohio-Mississippi Flood Control Program.

By agreement with the Corps of Engineers, the Division of Wildlife is responsible for all hunting and fishing in the District's 52,000 acres of land and water.

FISHES OF INTEREST TO ANGLERS

Clendening is noted for its fine populations of largemouth bass, crappies, flathead and channel catfish, saugeye, and white bass. There are also fair populations of perch, brown and black bullheads, and sunfish. Saugeye are stocked annually by the Division of Wildlife of the Ohio Department of Natural Resources.

METHODS OF FISHING AND BEST FISHING SITES

Spring bass fishing is very popular with anglers. April, May, and June produce many bass of five pounds and up each year. Casting the shoreline with artificial lures by wading or by boat in the cover areas of the eastern portions of the lake is the most successful method. Fishing the brushy and stump areas with minnows and jigs is the best way for crappies in the spring. Summer provides excellent flathead and channel catfish action for anglers. Flathead catfish from 20 to 60 pounds and channel catfish to 15 pounds are common catches at night during the summer months. Set lines baited with cut bait are the best method of harvest. For bluegill, fishing with a cane pole and worms or maggots is the best all-around method in the summer. Saugeye can be captured on small jigs (1/8 oz.), which are tipped with one-half of a nightcrawler. In the fall, saugeye can be captured by vertically jigging lures such as small Sonars or Vibe-E's. White bass can be captured on small white jigs (1/8 oz. or smaller).

RECREATIONAL FACILITIES

Recreational facilities include boat rental, bait picnic sites, campsites, cottages, and food service.

FISH OHIO

Anglers who catch a big fish should enter their prize in the Fish Ohio angler recognition program. A fish qualifies for an award if it meets the minimum size requirement set for the Fish Ohio program. Applications are available online at FishOhio.org.

FISH MANAGEMENT ACTIVITIES

The Division of Wildlife's fish management activities include stocking, construction of fish attractors, population monitoring with electrofishing, trap net, gill nets, and creel census. General physical and chemical water quality analyses are also periodically performed.

ADDITIONAL INFORMATION

The nearest Wildlife District Office is located at 912 Portage Lakes Drive, Akron, Ohio 44319 (phone number: 330-644-2293). The Division also has a website for information on fishing regulations, tips, maps, and other wildlife related material (www.wildohio.com). To get other maps or publications call toll free 1-800 WILDLIFE.

TURN IN A POACHER

Ohio's TIP, "Turn In a Poacher," program is helping to curtail poaching throughout the state. TIP is designed to involve the public in reporting wildlife violations. Citizens who observe wildlife violations should call the TIP toll-free hotline, 1-800-POACHER.
